

Community Insight profile for 'Reedland Crescent' area

Optivo

Report created 8 February 2018

# Finding your way around this Community Insight profile

**Introduction** Page 3 for an introduction to this report

**Population** There are 1,665 people living in Reedland Crescent

See pages 4-9 for more information on population by age and gender, ethnicity, country of birth, language, migration, household composition and religion  
**Reedland Crescent compared with 19% across South East**

See pages 37-39 for more information on qualifications, pupil attainment and early years educational progress

**Vulnerable groups** 49% of children are living in poverty in Reedland Crescent compared with 15% across South East

See pages 10-21 for more information on children in poverty, people out of work, people in deprived areas, disability, pensioners and other vulnerable groups  
**employment in Reedland Crescent compared with 40% across South East**

See pages 40-46 for more information on people's jobs, job opportunities, income and local businesses

**Housing** 4% of households lack central heating in Reedland Crescent compared with 2% across South East

See pages 22-28 for more information on dwelling types, housing tenure, affordability, overcrowding, age of dwelling and communal establishments  
**Crescent compared with 19% across South East**

See pages 47-49 for more information on transport, distances services and digital services

**Crime and Safety** The overall crime rate is lower than the average across South East

See pages 29-30 for more information on recorded crime and crime rates  
**South East**

**Communities & environment**

The % of people 'satisfied with their neighbourhood' is lower than the average across

See pages 50-52 for more information on neighbourhood satisfaction, the types of neighbourhoods locally, local participation and the environment, air pollution

**Health & wellbeing** 24% of people have a limiting long-term illness in Reedland Crescent compared with 16% across South East

See pages 31-36 for more information on limited long-term illness, life expectancy and mortality, general health and healthy lifestyles

**Appendix A**

# Introduction

## Community Insight for housing organisations

Community Insight gives you the data and analysis you need to ensure your services are underpinned by the best possible knowledge of local communities, leveraging the power of information right across your organisation, from high-level visualisations for Board level to detailed reports on local neighbourhoods.

Saving you time and money, Community Insight gives you the most relevant and up-to-date data on the communities where you work, with no need to invest in specialist mapping and data staff, consultancy or software.

- Upload details of your stock to our secure servers, and get up and running in minutes with data and reports for your properties, neighbourhoods and estates.
- Understand what the latest sources such as Census 2011 mean in your areas, as soon as data is released.
- Get the information you need for a joined-up approach to community investment.
- Tools to help frontline staff to take strategic responsibility for their patches.
- Data to help prioritise scarce resources, and provide baselines & trends for assessing impact.

## HACT and OCSI

Community Insight is a joint project from HACT and Oxford Consultants for Social Inclusion (OCSI).

HACT helps housing providers build stronger neighbourhoods and resilient communities. See [www.hact.org.uk](http://www.hact.org.uk) for more.

OCSI develop and interpret the evidence base to help the public and community organisations deliver better services. A 'spin-out' from the University of Oxford Social Policy Institute, OCSI have worked with more than 100 public and community sector clients at local, national and international level. See [www.ocsi.co.uk](http://www.ocsi.co.uk) for more.

## About the indicators

Information published by government as open data – appropriately visualised, analysed and interpreted – is a critical tool for housing organisations to improve their strategic and joined-up approach to community investment.

OCSI collect all local data published by more than 50 government agencies, and have identified key indicators relevant to the housing sector community investment to use in this report and the interactive webtool ([www.communityinsight.org](http://www.communityinsight.org)).

All indicators will be updated with latest data within days of being published by government.

## How we have identified the “Reedland Crescent” area

This report is based on the stock property location data (postcodes) loaded into Community Insight by Optivo, and the definition of the “Reedland Crescent” area (you can view this area on the Community Insight tool, either in the drop-down menu at the top-left of the map-page, or on the “Stock group” page if you are logged-in as an administrator). We have aggregated data for all the neighbourhoods in “Reedland Crescent” that contain stock, to create the data used in this report.

Alongside data for the “Reedland Crescent”, we also show data for your selected comparator areas: London and South East.

## This is version 2.2 of the Community Insight profile datasets and report

This report was created on 8 February 2018, and is based on version 2.2 of the Community Insight datasets and report.

# Population: Age and gender

## What information is shown here?

The information on this page shows the number of people living in Reedland Crescent. These population figures provide detail of the structure of the population by broad age bands and sex.

The first information box shows the total number of people usually resident in the area, with the male female breakdown. Also shown are numbers by sex and age, and the 'dependency ratio'. This is the ratio of non-working age (those aged 0-15 and over 65) to working age population and is useful in understanding the pressure on a productive population in providing for the costs of services and benefits used by the youngest and oldest in a population. For example, a ratio of 25% for example would imply one person of non-working age for every four people of working age.

The population pyramid compares the proportion of males and females by five-year age bands. The line chart shows how the population is changing over time in Reedland Crescent and comparator areas. The stacked bar chart, below, shows the age breakdown of the population in Reedland Crescent and comparator areas by broad age band.

Figure: Population by age  
Source: Mid-Year Estimates (ONS) 2016

Total Population	Aged 0-15	Working age population		Aged 65+
		Dependency ratio		
<b>1,665</b>	<b>375</b>	<b>1,020</b>	<b>275</b>	<b>0.64</b>
50.3% male; 49.7% female 62.0%	22.4% (South East average = 19.1%) 16.6% (South East average = 18.9%)			61.1% (South East average = 0.61) South East average = 0.61

### What information is shown here?

The information on the right shows the number of people in Reedland Crescent by ethnicity, based on each person's perceived ethnic group and cultural background.

The information boxes display the number of people who have self-identified as White British and the number from Black or Minority Ethnic groups (BMEs), as well as the five broad ethnic minority groups (White non-British, Mixed, Asian, Black and other ethnic group. The BME category includes all people who do not state their ethnicity as White British including those who identify as White but of a different ethnic identity.

The final information box shows the proportion of households where not all household members are of the same ethnicity (households with multiple ethnic groups).

The bar chart on the right shows a detailed breakdown of the percentage of people in BME groups by ethnic category.

White British	BME	White non-British	Mixed
1,500	85	35	25
94.8% (South East average = 85.2%) average = 5.4%	5.2% (South East average = 14.8%)	1.7% (South East average = 1.9%)	2.2% (South East average = 0.6%)
Asian	Black	Other ethnic group	Households with multiple ethnicities
15	5	5	35
0.9% (South East average = 5.2%)	0.2% (South East average = 1.6%)	5.0% (South East average = 9.0%)	0.3% (South East average = 0.6%)

# Population: Country of birth and household language

## What information is shown here?

The information on the right shows the number of people in Reedland Cresent by country of birth.

The top row information boxes display the number of people in Reedland Cresent who were born in England and outside the UK as well as the number of people with a UK passport and non-UK passport.

The second row information boxes show the language breakdown of households, identifying the number of households in Reedland Cresent with one or more members who cannot speak English.

The bar chart on the right shows a detailed breakdown of the percentage of people in Reedland Cresent born outside of England by the geographic region of birth.

Born in England	Born Outside the UK	With a UK passport	With a non-UK passport
1,510	50	965	35
95.4% (South East average = 84.8%)	3.4% (South East average = 12.1%)	61.1% (South East average = 79.0%)	2.2% (South East average = 8.2%)
All people in households have English as main language		At least one adult (not all) has English as main language	
No adults but some children have English as main language		No household members have English as main language	
640	5	0	10
97.9% (South East average = 93.2%)	0.8% (South East average = 3.2%)	0.0% (South East average = 0.5%)	1.4% (South East average = 3.1%)

## What information is shown here?

The information box shows the number and percentage of migrants in Reedland Crescent. A migrant is defined as a person with a different address one year before Census day. The migrant status for children aged under one in households is determined by the migrant status of their 'next of kin' (defined as in order of preference, mother, father, sibling (with nearest age), other related person, Household Reference Person).

The chart on the right shows the population turnover rate by age band. This is calculated as the rate of in or out migratory moves within England and Wales per 1,000 resident population. Figures are based on GP patient register records. The left-hand bars (lighter colour) show people moving out of the area – higher values for a particular group indicate that this age-group is more likely to move away from the area. The right-hand bars (darker colour) show people moving into the area – higher values for a particular group indicate that this age-group is more likely to move into the area.

The data table on the top right and the chart on the bottom right show the total number of people registering with a National Insurance number who have come from overseas. This is a measure of the number of people who have migrated to the UK from overseas to work, who have registered for a National Insurance number in the local area.

People who have moved address within the last 12 months (Census 2011)  
(National Insurance no. registrations of overseas nationals) (DWP 2015/16)

**What information is shown here?**

The information on this page shows the composition of household types in Reedland Crescent. The information boxes contain the number of households in Reedland Crescent classified under the main household composition breakdowns. The chart on the right shows the same information as a percentage of all households, with comparator areas. The chart below shows household composition with breakdowns also by tenure of household (whether a household is living in owner occupied, Local Authority rented, Housing Association rented and private rented accommodation). This enables users to compare the different living arrangements of households in the owner occupied, social rented and private rented sectors.

### What information is shown here?

The information on the right shows the number of people living in Reedland Crescent by religious belief, categorised by the six major religions, other religion and no religion.

The bar chart shows the percentages of people in Reedland Crescent and comparator areas who are of non-Christian religious belief, displayed by religion.

Note, figures in the table and charts may not add up to 100% because they do not include figures for those for who did not reply to the religion question – who were recorded as ‘religion not stated’ in the census data publication.

Christian	Buddhist	Hindu	Jewish
900	5	5	0
56.9% (South East average = 59.8%) average = 1.1%)		0.3% (South East average = 0.5%) 0.0% (South East average = 0.2%)	0.3% (South East

# Vulnerable groups: People out of work (1)

## What information is shown here?

The information in this section shows counts of people who are out of work and receiving workless benefits: Jobseekers Allowance (JSA)/Universal Credit (UC) and Incapacity Benefit (IB)/Employment and Support Allowance (ESA).

JSA is payable to people under pensionable age who are available for, and actively seeking, work of at least 40 hours a week. Universal Credit claimants are additionally included in the 'Unemployment Benefit' count where they were previously eligible for JSA. IB and ESA are workless benefits payable to people who are out of work and have been assessed as being incapable of work due to illness or disability and who meet the appropriate contribution conditions.

The information boxes on the top right show: the total number of adults (aged 16-64) receiving JSA and Universal Credit; the total claiming for more than 12 months; claimants aged 18-24, the number of people receiving 'Incapacity benefits' (IB or ESA); and the number and proportion of 16-24 year olds receiving workless benefits (JSA, IB or ESA).

The line charts on the following page show month on month changes in the proportion of people claiming IB or ESA and the proportion claiming JSA or out of work Universal Credit across Reedland Crescent and comparator areas.

Unemployment Benefit (JSA and UC) claimants (Dec-17) (Dec-17)	Youth unemployment (JSA/UC claimants aged 18-24) unemployment claimants (JSA and UC) (Dec-17)	JSA claimants claiming for more than 12 months Female	JSA claimants claiming for more than 12 months Male
55	10	10	35

## Vulnerable groups: Disability

### What information is shown here?

The information in this section looks at the prevalence of disability among people living in Reedland Crescent. There are two measures of disability presented: those claiming Attendance Allowance or Disability Living Allowance.

Attendance Allowance is payable to people over the age of 65 who are so severely disabled, physically or mentally, that they need a great deal of help with personal care or supervision. Disability Living Allowance is payable to children and adults in or out of work who are below the age of 65 and who are disabled, need help with personal care or have walking difficulties. It is a non-means tested benefit, which means it is not affected by income.

The information boxes on the right show the total number of people receiving Attendance Allowance and Disability Living Allowance across Reedland Crescent.

(May-17)	Disability Living Allowance claimants	Attendance Allowance claimants (May-17)
	125	45

# Vulnerable groups: Working age benefit claimants (1)

## What information is shown here?

The information in this page shows the number of people in receipt of key welfare benefits payable by the Department for Work and Pensions (DWP).

Working age DWP Benefits are benefits payable to all people of working age (16-64) who need additional financial support due to low income, worklessness, poor health, caring responsibilities, bereavement or disability. Housing Benefit (HB) can be claimed by a person if they are liable to pay rent and if they are on a low income and provides a measure of the number of households in poverty. Income Support is a measure of people of working age with low incomes and is a means tested benefit payable to people aged over 16 working less than 16 hours a week and having less money coming in than the law says they need to live on.

Universal Credit provides a single payment based upon the circumstances of the household to provide support for housing costs, children and childcare costs and additions for disabled people and carers. Universal Credit is available to people who are in work and on a low income, as well as to those who are out-of-work

The chart on the right shows the change in the proportion of working age people receiving DWP benefits. The charts on the following page show the change in the proportion of Income Support and Housing Benefits claimants and the age breakdown of DWP benefit claimants across Reedland Crescent and comparator areas.

	Working age DWP Benefit claimants (Nov-16)	Female working age benefit claimants (Nov-16)	Male working age benefit claimants (Nov-16)
	275	150	125
	27.0% (South East average = 8.3%)	29.8% (South East average = 9.3%)	24.3% (South East average = 7.3%)
	Income Support (IS) claimants (May-17)	Housing Benefit claimants (Aug-17)	Universal Credit claimants (Oct-17)

## What information is shown here?

The information on this page looks at overall levels of deprivation across Reedland Crescent based on the Index of Multiple Deprivation (IMD) 2015. IMD 2015 is the most comprehensive measure of multiple deprivation available. The concept of multiple deprivation upon which the IMD 2015 is based is that separate types of deprivation exist, which are separately recognised and measurable. The IMD 2015 therefore consists of seven types, or domains, of deprivation, each of which contains a number of individual measures, or indicators.

The information boxes on the right show the number of people in Reedland Crescent living in neighbourhoods ranked among the most deprived 20% of neighbourhoods in England on IMD 2015 and the seven IMD domains. The chart on the right shows the number of people living in neighbourhoods grouped according to level of deprivation. The charts on the following pages show the same information for each of the domains. All neighbourhoods in England are grouped into ten equal sized groups "deciles"; the 10% of neighbourhoods with the highest level of deprivation (as measured in the IMD) are grouped in decile 10, and so on with the 10% of neighbourhoods with the lowest levels of deprivation grouped in decile 1.

Number of people in Reedland Crescent living in the most deprived 20% of areas of England by Indices of Deprivation (ID) 2015 domain

## Vulnerable groups: Children (1)

### What information is shown here?

This page looks at children in out of work households, children in poverty and children in lone parent households. Children in 'out of work' households, are defined as dependent children living in families where all adults are in receipt of Jobseeker's Allowance, Income Support, Employment and Support Allowance, Incapacity Benefit/Severe Disablement Allowance or Pension Credit. This measure includes Universal Credit claimants. The children in poverty measure shows the proportion of children (aged 0-15) in families in receipt of out of work benefits, or in receipt of tax credits where their reported income is less than 60% median income. Out of work means-tested benefits include: Income-Based Jobseekers Allowance, incapacity benefits and Income Support.

The information boxes on the right show the count of people in each of these three categories in Reedland Crescent. The bar chart shows the percentage of people in each of these categories across Reedland Crescent and comparator areas (as a percentage of all children receiving Child Benefit). The line chart shows the year on year change in the proportion of children in out of work households.

Children in 'out of work' households (2016)	Children in lone parent households (2012)	Children in poverty (2014)
135	205	175
36.2% (South East average = 10.1%)	51.3% (South East average = 22.0%)	48.6%
	(South East average = 14.7%)

### What information is shown here?

The information on this page shows levels of child wellbeing across Reedland Cresent as measured using the Child Wellbeing Index (CWI) from 2009. The CWI is a small area index measuring child wellbeing – how children are doing in a number of different aspects of their life. The index covers the major domains of a child’s life that have an impact on child wellbeing and that are available for neighbourhoods in England. The CWI is made up of seven domains.

The eight information boxes on the right show the number of people in Reedland Cresent living in areas ranked among the most deprived 20% of neighbourhoods in England on CWI and the seven domains. The chart on the right shows the number of people living in neighbourhoods grouped according to level of child wellbeing deprivation. All neighbourhoods in England are grouped into ten equal sized groups “deciles”; the 10% of neighbourhoods with the highest level of deprivation (lowest level of child wellbeing) are grouped in decile 10, and so on with the 10% of neighbourhoods with the lowest levels of deprivation grouped in decile 1.

## What information is shown here?

The information on this page looks at pensioner groups that may face greater risks or who may have different types of need. There are three measures included: pensioners without access to transport, pensioner loneliness and pensioners in poverty.

Pensioners without access to transport are those with no access to a car or van. The dataset only includes pensioners living in private households.

There are two indicators of pensioner loneliness. The census provides a measure of the proportion of pensioners living alone (defined as households of one pensioner and no other household members). In addition, Age Concern have developed a Loneliness Index (which predicts the prevalence of loneliness amongst people aged 65+) based on census data. Areas with a value closer to 0 predict a greater prevalence of loneliness amongst those aged 65 and over and living in households compared to areas with a value further away from 0.

Pensioners in poverty are those in receipt of Pension Credit. Pension Credit provides financial help for people aged 60 or over whose income is below a certain level set by the law.

The information boxes present information on the counts of pensioner households or pensioners in each category. The chart on the top right shows the change in the proportion of people receiving Pension Credit across Reedland Crescent and comparator areas.

The chart on the bottom right compares Loneliness Index scores across Reedland Crescent and comparator areas - a value closer to 0 predicts a greater prevalence of loneliness amongst those aged 65.

### What information is shown here?

The information on this page looks at the number and proportion of people in three groups with specific needs: mental health issues; households with multiple deprivation; people providing unpaid care.

The figures for people with mental health issues are based on Employment Support Allowance/Incapacity Benefit claimants who are claiming due to mental health related conditions. Incapacity Benefit is payable to persons unable to work due to illness or disability.

Households with multiple deprivation are households experiencing four key measures of deprivation:

- All adult household members have no qualifications
- At least one household member is out of work (due to unemployment or poor health)
- At least one household member has a limiting long-term illness
- The household is living in overcrowded conditions

Informal care figures show people who provide any unpaid care by the number of hours a week they provide that care. A person is a provider of unpaid care if they give any help or support to another person because of long-term physical or mental health or disability, or problems related to old age.

The line chart on the right shows the change in the number of people claiming Incapacity benefit for mental health reasons as a proportion of the working age population and the chart below it includes figures for children and all people providing unpaid care across Reedland Crescent.

Mental health related benefits (DWP May-17)	Households suffering multiple deprivation (Census 2011)
People providing unpaid care (Census 2011)	Unpaid care (50+ hours per week) (Census 2011)
60	179
5.9% of working age adults (South East average = 2.1%) average = 9.8%	0.9% (South East average = 0.4%) 4.0% (South East average = 2.0%)

### What information is shown here?

The information on this page looks at the type of dwelling space people live in. A dwelling space is the accommodation occupied by an individual household or, if unoccupied, available for an individual household, for example the whole of a terraced house, or a flat in a purpose-built block of flats.

The information boxes to the right show the number of people in Reedland Crescent living in each accommodation type. The chart on the right shows a breakdown of households by accommodation type across Reedland Crescent and comparator areas. The chart below shows a breakdown of households by accommodation type across Reedland Crescent and comparator areas and the chart on the right compares the accommodation types of owner occupied, Local Authority rented, Housing Association rented and private rented households across Reedland Crescent.

## What information is shown here?

The information on this page looks at the tenure of housing in Reedland Crescent. The information boxes show the number of households broken down by tenure type and the chart shows the tenure breakdown across Reedland Crescent and comparator areas.

- ‘Owner occupied’ housing includes accommodation that is either owned outright, owned with a mortgage or loan, or shared ownership (paying part rent and part mortgage).
- ‘Social rented’ housing includes accommodation that is rented from a council (Local Authority) or a Housing Association, Housing Co-operative, Charitable Trust, Non-profit housing company or Registered Social Landlord.
- ‘Rented from the Council includes accommodation rented from the Local Authority
- ‘Housing Association or Social Landlord’ includes rented from Registered Social Landlord, Housing Association, Housing Co-operative, Charitable Trust and non-profit housing Company.
- ‘Private rented or letting agency’ includes accommodation that is rented from a private landlord or letting agency.
- ‘Other Rented’ includes employer of a household member and relative or friend of a household member and living rent free.

Owner occupied	Owner-occupied: owned outright mortgage or loan	Owner-occupied owned: with
282	134	148
43.1% (South East average = 68.7%)	20.5% (South East average = 32.5%) (South East average = 35.1%)	22.6%
Owner-occupied: shared ownership	Social rented households Council	Rented from
00	314	59
0.0% (South East average = 1.1%)	47.9% (South East average = 13.7%) (South East average = 5.8%)	9.0% (South East average = 5.8%)
Rented from Housing Association or Social Landlord agency	Other rented dwellings	Rented from private landlord or letting
255	41	18
38.9% (South East average = 7.9%)	6.3% (South East average = 14.7%) (South East average = 2.9%)	2.7%

## What information is shown here?

The information in this section shows measures of housing costs in Reedland Crescent. Data on house prices is from the Land Registry open data price-paid dataset ([www.landregistry.gov.uk/market-trend-data/public-data/price-paid-data](http://www.landregistry.gov.uk/market-trend-data/public-data/price-paid-data)), which is updated monthly.

## House prices by dwelling type

The information boxes on the right and the chart on the following page show the mean house prices by accommodation type across Reedland Crescent and comparator areas for four key dwelling types (detached houses, semi-detached houses, flats and terraced houses). The second bar chart on the following page shows the monthly change in the number of transactions and average price across Reedland Crescent.

## Council tax bands

The data on Council Tax bands shows the number (and proportion) of houses in bands A, B or C (the lowest price bands) and F, G and H (the highest price bands) locally. These price bands are set nationally, so can be used to show how the cost of all local property (not just those properties that have recently been sold) compares with other areas; the chart on the right compares Reedland Crescent and comparator areas for these Council Tax bands.

Source: Land registry Oct16-Sep17

Figure: Average house prices and number of transactions, by month  
Source: Land Registry

## What information is shown here?

The information in this section combines measures of local house prices and local earnings to provide a more balanced picture of housing affordability.

There are three indicators displayed here: housing affordability gap, savings ratio and total affordability ratio. Each of these indicators is given for two measures of house price: the average (mean) house price and the lower quartile house price. The lower quartile house price is set such that the cheapest 25% of houses fall within this price and is a measure of the cost of cheaper, more affordable housing in the area.

**Housing affordability gap:** An estimate of the gap between the cost of local houses and the amount residents can borrow. This is defined as the difference between the local house price (either average or lower quartile) and 4.5 times local annual earnings (mortgage lenders are typically willing to lend 4-5 times annual salaries). Higher figures represent more unaffordable houses.

**Savings ratio:** The ratio between 15% of the house price (an estimate of the savings required for a deposit) and monthly earnings. It can be interpreted as the number of months' worth of earnings required for a deposit (not accounting for inflation or changes in earnings or house prices).

**Total affordability ratio:** This is the ratio between the total house price and annual earnings. It can be interpreted as the number of years' worth of earnings required for a deposit (not accounting for inflation or changes in earnings or house prices).

The data for these measures come from the Land Registry (house prices) and ONS (earnings data). Earnings data is published at MSOA level. Average house price data is published at postcode level whilst lower quartile house prices are published at MSOA level. Where necessary, we have modelled data to LSOA and OA geographies.

Lower quartile house price ('affordable housing')	Average house price
Affordability gap	Affordability gap
<b>£31,130</b>	<b>£30,133</b>
South East average = £94,187	South East average = £199,146
Savings ratio (months of earnings for a deposit)	Savings ratio (months of earnings for a deposit)
<b>10.14</b>	<b>9.94</b>
South East average = 13.61	South East average = 17.83
Total ratio (years of earnings for a house)	Total ratio (years of earnings for a house)
<b>5.45</b>	<b>5.25</b>
South East average = 7.05	South East average = 8.55

## What information is shown here?

The information on this page details indicators of the built environment: overcrowded housing, vacant housing, population density, the size of housing units and the proportion of households lacking central heating.

A household's accommodation is described as 'without central heating' if it had no central heating in any of the rooms (whether used or not). The data also shows breakdowns by tenure. This enables users to compare differences in the proportion of households with inadequate heating supply in the owner occupied, social rented and private rented sectors.

Households are classified as overcrowded if there is at least one room fewer than needed for household requirements using standard definitions. The standard used to measure overcrowding is called the 'occupancy rating' which relates to the actual number of rooms in a dwelling in relation to the number of rooms required by the household, taking account of their ages and relationships. The room requirement states that every household needs a minimum of two common rooms, excluding bathrooms, with bedroom requirements that reflect the composition of the household. The occupancy rating of a dwelling is expressed as a positive or negative figure, reflecting the number of rooms in a dwelling that exceed the household's requirements, or by which the home falls short of its occupants' needs.

Vacant dwellings are households that do not have any usual residents. This includes households that may still be used by short-term residents, visitors who were present on census night, or a combination of short-term residents and visitors. It also includes vacant household spaces and household spaces that are used as second addresses.

	Population density (persons / hectare)	Houses lacking central heating	Overcrowded Housing
	<b>55.3</b>	<b>24</b>	<b>49</b>
	South East average = 4.7	3.7% (South East average = 2.4%)	7.5% (South East average = 7.5%)
Vacant Dwellings	Dwellings with 2 rooms or fewer		Dwellings with 8 or more rooms
	<b>15</b>	<b>07</b>	<b>43</b>
	2.2% (South East average = 4.0%)	1.1% (South East average = 3.5%)	6.6% (South East average = 16.1%)
	Average dwelling size (persons)		
	<b>2.40</b>		
	South East average = 2.38 people)

## What information is shown here?

This page details the energy efficiency ratings of domestic buildings within Housing Neighbourhood.

The data are taken from Energy Performance Certificates (EPC) for domestic buildings published by DCLG and have been aggregated to Output Areas by the Consumer Data Research Centre. The definitions of the measures on the right are given below.

The energy efficiency rating, expressed in Standard Assessment Procedure (SAP) points, is a score between 1-100 with 1 being poor energy efficiency and 100 being excellent energy efficiency. The current average rating of buildings is given alongside the potential rating (if improvements to the buildings were made) and the difference between the two - the 'energy efficiency gap'.

Buildings are awarded a band A EPC rating if their energy efficiency rating is equal or above 92. The number and proportion of inspected band A buildings is given as well as the potential numbers. Again, the difference between current and potential is given. Please be aware that these figures do not account for all domestic buildings in an area.

	Energy efficiency rating, current (SAP points)	Energy efficiency rating, potential (SAP points)	Energy efficiency gap (SAP points)
South East average = 65.55	66.73	81.89	15.15
South East average = 78.06			South East average = 12.51
Band A buildings, current	0	4	Difference between current and potential
(0.00%) South East average = 0.12%		(0.86%) South East average = 2.98%	(0.86%) South East average = 3.11%

Source: DCLG. Data collected between 2009-2016.

## Housing: Energy efficiency of domestic buildings

Only homes that have been built, bought, sold or retrofitted since 2008 have an EPC, which represents about 50 to 60 per cent of homes within a local authority area. Additionally, data has not been published where the holder of the energy certificate has opted-out of disclosure, energy certificates are excluded on grounds of national security or energy certificates are marked as “cancelled” or “not for issue”.

## Housing: Dwellings by age of dwelling

What information is shown here?

The information on this page shows the number of domestic properties (the 'dwelling stock') broken down by age of property (when the property was constructed).

Built before 1900	Built between 1900 and 1939	Built after 2000	Built between 1945 and 1999
80	40	540	20
11.9% (South East average = 15.6%)	80.6% (South East average = 63.2%)	6.0% (South East average = 19.1%)	4.0% (South East average = 2.0%)

# Housing: Communal establishment residents

## What information is shown here?

The information on this page shows the number of people living in communal establishments, with breakdowns by the main types.

A communal establishment is defined as an establishment providing managed (full-time or part-time supervised) residential accommodation.

The information boxes on the right show the number and proportion of people in communal establishments by main type of establishment. Medical and care establishments include psychiatric hospital / homes, other hospital homes children's homes, residential care homes, nursing homes managed by the NHS, Local Authority or private organisation; Educational establishments include primarily University halls of residence; Defence establishments include barracks, air bases and naval ships; Other establishments include prison service establishments, bail hostels, hotels, boarding houses or guest houses, hostels and civilian ships.

The chart on the top right provides the same information with associated comparator areas.

All in communal establishments	Medical and care establishments	Defence establishments	Education	Other establishments
07	07	00	00	00
0.4% (South East average = 2.2%)	0.4% (South East average = 0.9%)	0.0% (South East average = 0.1%)	0.0% (South East average = 0.9%)	0.0% (South East average = 0.1%)

### What information is shown here?

The information on this page and the following shows the level of recorded crime in Reedland Crescent and comparator areas. This is based on data for individual crime incidents published via the [www.police.uk](http://www.police.uk) open data portal, which has been linked by Community Insight to your selected neighbourhoods. Further information on how these crimes and incidents have been categorised, as well as which crimes and incidents have been mapped and why, is available at: [www.police.uk/about-this-site/faqs/#why-are-some-crimes-not-displayed-on-the-map](http://www.police.uk/about-this-site/faqs/#why-are-some-crimes-not-displayed-on-the-map)

The information boxes show counts and rates for the main crime types and anti-social behaviour incidents. The overall crime rate is presented for monthly, quarterly and annual snapshots, with the underlying crime types shown as annual totals.

The line charts to the right and on the following page track monthly change in recorded crime across five key offences (violent crime, anti-social behaviour, burglaries, criminal damage and vehicle crime) across Reedland Crescent and comparator areas for the last 12 months of data.

	September 2017 monthly total Jul17-Sep17	All crimes Oct16-Sep17	All crimes All crimes
	<b>21</b>	<b>59</b>	<b>205</b>

## What information is shown here?

The information in this section explores variations in life expectancy and premature mortality. Life expectancy is a measure of the age a person born today can expect to live until, if they experience current mortality rates throughout their life. The chart on the right shows life expectancy at birth for females and males in Reedland Crescent and comparator areas.

The first chart on the following page shows the standardised mortality ratio for all causes and all ages for Reedland Crescent. This indicator highlights the ratio of observed to expected deaths (given the age profile of the population). A mortality ratio of 100 indicates an area has a mortality rate consistent with the age profile of the area, less than 100 indicates that the mortality rate is lower than expected and higher than 100 indicates that the mortality rate is higher than expected.

The second chart on the following page show incidence of cancer (with breakdowns for the most common forms of cancer). The data is presented as an incidence ratio (ratio of observed incidence vs expected incidence given the age profile of the population).

## What information is shown here?

The information in this section looks at general levels of health, focusing on the number of people living in neighbourhoods with poor levels of overall health (health deprivation hotspots) and the number of people with a limiting long-term illness, with breakdowns by housing tenure. This enables users to compare the health levels of people who own their own homes, against those who rent privately or from the Local Authority, Housing Association or other social rented landlord.

Limiting long-term illness is defined as any long-term illness, health problem or disability which limits someone's daily activities or the work they can do. Health deprivation 'hotspots' are neighbourhoods ranked among the most deprived 20% of neighbourhoods in England on the Indices of Deprivation 2015 Health domain. The domain measures morbidity, disability and premature mortality. All neighbourhoods in England are grouped into ten equal sized groups "deciles"; the 10% of neighbourhoods with the highest level of health deprivation are grouped in decile 10, and so on with the 10% of neighbourhoods with the lowest levels of health deprivation grouped in decile 1.

The chart on the right shows the number of people in Reedland Crescent living in each health decile. The charts on the following page show the proportion of residents in Reedland Crescent with a limiting long-term illness, with breakdowns by age and housing tenure.

The third chart on the following page shows the proportion of babies born with a low birth weight in the local area and comparator areas. Low birth weight is defined as a birth weight of less than 2500 grams.

Number of people living in health deprivation 'hotspots' (Indices of Deprivation 2015 – Communities and Local Government)	People with a limiting long-term illness (Census 2011) aged 16-64 with a limiting long-term illness (Census 2011)	People aged 16-64 with a limiting long-term illness (Census 2011)	People living in owner occupied housing, with a limiting long-term illness (Census 2011)	People living in social rented housing, with a limiting long-term illness (Census 2011)	People living in private rented housing, with a limiting long-term illness (Census 2011)
1,547	380	215	100	182	21
100.0% (South East average = 5.7%)	24.0% (South East= 15.7%)	22.0% (South East= 10.6%)	14.6% have a limiting longterm illness (South East average = 13.3%) East average = 24.8%	22.7% have a limiting longterm illness (South East average = 12.8%)	15.1% have a limiting longterm illness (South East average = 12.8%)

## What information is shown here?

The information in this section looks at admissions to hospital by main health condition. The chart on the top right shows emergency admissions to hospital across Reedland Crescent and comparators. The chart on the bottom right shows elective in-patient hospital admissions (admissions that have been arranged in advance).

The data are presented as standardised ratios; a ratio of 100 indicates an area has an admission rate consistent with the national average, less than 100 indicates that the admission rate is lower than expected and higher than 100 indicates that the admission rate is higher than expected.

Figure: Emergency hospital admissions: Standardised ratio (select causes)

## What information is shown here?

The information on this page looks at lifestyle behaviours of people living in Reedland Crescent. Lifestyle behaviours are risk factors which play a major part in an individual's health outcomes and will have varying physical and psychological consequences.

The chart on the top right shows the healthy eating levels (consumption of five or more portions of fruit and vegetables a day among adults) in Reedland Crescent. It also shows smoking prevalence and levels of binge drinking in these areas. Binge drinking is defined as the consumption of at least twice the daily recommended amount of alcohol in a single drinking session (8 or more units for men and 6 or more units for women).

The chart on the bottom right shows the percentage of people children (in reception year and year 6) and adults classified as obese in Reedland Crescent. People are considered obese when their body mass index (BMI) a measurement obtained by dividing a person's weight by the square of the person's height, exceeds 30 kg/m<sup>2</sup>.

Data for adult health are modelled estimates created from Health Survey for England 2006-2008. This is due to a lack of alternative small-area data for these indicators.

Figure: "Healthy eating" (consumptions of 5+ fruit and veg a day), binge drinking and smoking  
Source: Health Survey for England 2006-2008

Figure: Children and adults classified as obese  
Source: National Child Measurement Programme (NCMP) (2013-2015), Health Survey for England 2006-2008

What information is shown here?

This chart shows estimates of the levels of physical activity among adults. The data have been produced by Sport England using a Small Area Estimation technique - modelling down from a National Survey (the Active Lives Survey (November 2015-2016)) to Middle Layer Super Output Area (MSOA) based on the local demographic characteristics of the local population. For more information on the modelling method see [https://www.sportengland.org/media/12667/16-092901-01\\_sae\\_techreport\\_final.pdf](https://www.sportengland.org/media/12667/16-092901-01_sae_techreport_final.pdf)

The categories of physical activity follow the guidelines set by the Chief Medical Officer and are defined below:

Physically active: undertaking at least 150 minutes per week in the past month excluding gardening

Physically inactive: undertaking less than 30 minutes in the past month excluding gardening

Physical activity at least twice a month: undertaking physical activity on at least two occasions in the past month

Figure: Physical activity among adults

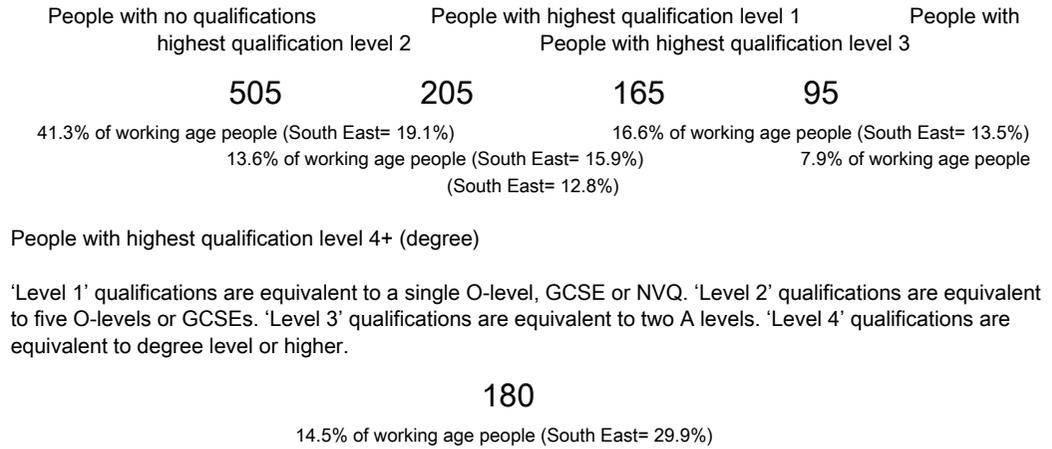

Source: Sport England (Active Lives Survey) 2015/16

### What information is shown here?

The information boxes and chart on the right show the education levels of residents in Reedland Crescent, showing the number and proportion of adults (aged 16+) by highest level of qualification.

Note, figures in the table and charts may not add up to 100% because they do not include figures for those for who with other qualifications or unknown qualifications.

Source: Census 2011

Source: Census 2011

## What information is shown here?

The information on this page shows the outcomes of children in the Early Years Foundation Stage (EYFS), a series of tests measuring children's progress in terms of Personal, Social and Emotional Development (PSED) and Communication, Language and Literacy (CLL). These are typically 5 year old pupils; however a minority of slightly older and younger pupils may have been assessed.

The new Early Years Foundation Stage Profile requires practitioners to make a best fit assessment of whether children are emerging, expected or exceeding against each of the new 17 Early Learning Goals (ELGs). Children have been deemed to have reached a Good Level of Development (GLD) in the new profile if they achieve at least the expected level in the ELGs in the prime areas of learning (personal, social and emotional development; physical development; and communication and language) and in the specific areas of mathematics and literacy. These are 12 of the 17 ELGs. The Department for Education has also introduced a supporting measure which measures the total number of points achieved across all 17 ELGs and reports the average of every child's total point score.

The chart on the right shows the percentage of pupils achieving 17 ELGs, the average point score at Early Years Foundation stage and the percentage of pupils achieving a good level of development.

Figure: Early years foundation stage profile  
Source: Department for Education (2013-2014)

## What information is shown here?

The chart on the top right shows the education levels of pupils in Reedland Crescent, showing the examination results at Key Stage 1 (tests set at aged 7) Key Stage 2 (tests set at aged 11) and Key Stage 4 (GCSEs).

The figures show the Average Point Score of pupils from each of the Key Stage examinations. This adjusts for high achieving pupils as well as pupils achieving expected levels.

The chart on the top right shows Average Point Score (across all examinations) per pupil at Key Stage 1 and Key Stage 2. The chart on the bottom right compares the gap in Average Point Score at Key Stage 4 (GCSE) per pupil between Reedland Crescent and the national average over time. The gap is measured as the point difference against the England average. Areas with a score of greater than 1 are performing better than the national average, while areas with a score of less than 1 are performing below.

Figure: Pupil attainment at Key Stage 4

### What information is shown here?

The information on this page looks at three types of income category: average household income; average household income after housing costs; and households living in fuel poverty. Fuel poverty is said to occur when in order to heat its home to an adequate standard of warmth a household needs to spend more than 10% of its income on total fuel use.

The information boxes on the top right provide an estimate of the number of households in Reedland Crescent below the poverty line and an estimate for the number of households in fuel poverty.

The chart on the right shows the average weekly household income estimate (equivalised to take into account variations in household size) across Reedland Crescent and comparator areas (before and after housing costs).

Weekly household income (Office for National Statistics 2013/14)	Weekly household income, after housing costs (Office for National Statistics 2013/14)	Weekly household Households living in 'Fuel Poverty' Department for Energy and Climate Change (2015)
<b>£770</b>	<b>£560</b>	<b>80</b>
South East Average = £898	South East Average = £608 (South East = 9.4%)	11.4% of households

Figure: Weekly household earnings (£)

## What information is shown here?

The levels of private debt, in the form of unsecured loans and mortgage debt, for Reedland Crescent are displayed here.

These figures, available at postcode sector level, are published by UK Finance and account for around 60% of borrowing in the UK. OCSI have modelled this data to Output Areas using an address based lookup from postcode sector to Output Area in combination with the number of local households and the local population.

The personal debt figure is the total amount of borrowing outstanding on customer accounts divided by the population aged 18+. Personal debt includes all unsecured loans such as credit cards, credit for new cars (eg when buying on finance) and other personal loans. Student debt is not included.

The mortgage debt figure is the total borrowing outstanding on customer accounts for residential mortgages divided by the total number of households.

Personal debt	Residential mortgage debt
<b>£0,763</b>	<b>£26,982</b>
South East Average = £0,810	South East Average = £50,825

### What information is shown here?

The information on this page shows economic activity breakdowns for adults aged 16-74 in Reedland Crescent.

The data in the information boxes shows the number and proportion of residents who are economically active, with breakdowns for those working part time, full time or are self-employed (note, these figures do not add up to all those economically active as it excludes those economically active who are unemployed or full-time students).

The charts on this page show economic activity rates with breakdowns by tenure.

Economically active	Full-time employees people	Part-time employees Economically inactive	Self-employed
675	322	169	67
61.0% (South East average = 72.1%) average = 13.8%)	6.1% (South East average = 11.0%)	29.1% (South East average = 40.4%)	15.3% (South East average = 27.9%)

### What information is shown here?

The information on this page shows breakdowns of the main industry sectors people in Reedland Crescent are working in, and their occupational status.

The data in the top information boxes shows the three largest employment sectors for residents in the local area, also the number and percentage of employed people working in each of these sectors. The lower information boxes and the chart on the right show the numbers of residents in Reedland Crescent by type of occupation (e.g., managers, professional, administrative). The chart on the following page compares the occupational status of owner occupiers, Local Authority renters, Housing Association renters and private renters across Reedland Crescent.

Largest employment sector		Second largest employment sector		Third largest	
Retail		Health & social work		Construction	
105 employees (19% of 575 of people in employment)		70 employees (12% of 575 of people in employment)		60 employees (11% of 575 of people in employment)	
Managerial occupations		Professional (or associate) occupations		Administrative or	
secretarial occupations		Skilled trades occupations		Elementary occupations	
<b>45</b>	<b>105</b>	<b>50</b>	<b>65</b>	<b>125</b>	
7.9% of 575 people in employment (South East = 12.3%)		18.3% of 575 people in employment (South East = 32.6%)		11.3% of 575 people in employment (South East = 11.1%)	
		8.5% of 575 people in employment (South East = 11.5%)		22.2% of 575 people in employment (South East = 9.7%)

The table below shows the number of Housing Association Residents by occupation group across Reedland Crescent and comparator areas.

Figure: Occupation by tenure  
Source: Census 2011

People living in Housing Association properties	Reedland Crescent	London South East		
	N	%	%	%
Higher managerial & professional occupations	12	5.0	4.6	2.7
Lower managerial & professional occupations	9	3.7	14.9	9.8
Intermediate occupations	12	5.0	8.8	6.1
Small employers and own account workers	13	5.4	5.4	6.4
Lower supervisory and technical occupations	11	4.6	5.9	9.2
Semi-routine occupations	21	8.7	12.7	15.1
Routine occupations	58	24.1	8.8	15.5
Never worked or long-term unemployed	19	7.9	11.3	5.6
Unclassified	86	36	28	30

## What information is shown here?

The information on this page shows the number of vacant jobs in Reedland Crescent compared against the overall unemployment levels in the area.

The 'Unemployment to 'Available Jobs' ratio, shown in the information box on the right and the line chart below is the total number of people claiming unemployment benefit (Jobseekers Allowance) divided by the total number of job vacancies notified to Jobcentre Plus expressed as a ratio.

The bar chart on the bottom right shows month-on-month changes in the number of job vacancies notified to Job Centre Plus, that are located in the area covering Reedland Crescent (based on postcode location of the job). Note this data was last updated by Jobcentre Plus for November 2012.

Figure: Ratio of unemployment (JSA claimants) to jobs (vacancies notified to Jobcentre Plus)  
Source: Office for National Statistics/Job Centre Plus, Department for Work and Pensions

Unemployment to 'Available Jobs' ratio Source: Job Centre Vacancies - Office for National Statistics/Jobcentre Plus (Nov-12), Jobseekers Allowance claimant count – Department for Work and Pensions (Nov-12)

### What information is shown here?

The information in this section shows the concentration of workforce jobs in Reedland Crescent. Workforce jobs are taken from the Business Register and Employment Survey (BRES) which publishes employee and employment estimates based on a survey of approximately 80,000 businesses and weighted to represent all sectors of the UK economy.

The information boxes show the three largest industry groups for workforce jobs based in Reedland Crescent. The bar chart on the top right shows the 'Jobs Density' (the number of jobs as a % of working age population) across Reedland Crescent over time. The bar chart on the bottom right shows the share of jobs broken down by public and private sector.

Largest industry sector	Second largest industry sector	Third largest industry sector
<b>Hotels and catering</b>	<b>Manufacturing</b>	<b>Education</b>
37.5% of all people in employment	25.0% of all people in employment	12.5% of all people in employment

## What information is shown here?

The information in this section shows the concentration of 'local business units' in Reedland Crescent. 'Local business units' are counts of businesses based on the location of an operational unit. Though larger businesses such as supermarket chains may have their head office in a large city, these figures measure all subsidiaries of that larger enterprise based on where subsidiaries are located. The figures cover all business eligible for VAT (1.7 million businesses in the UK are registered for VAT). These businesses are categorised into 16 broad industry groups derived from the Standard Industrial Classification (UKSIC (2003)).

The information boxes show the three largest industry groups for businesses based in Reedland Crescent. The line chart shows the change in the number of businesses per head of the population across Reedland Crescent over time. The bar chart shows the count of local business broken down by size of business. Businesses are broken down into four employment size bands based on the number of paid employees (0-4, 5-9, 10-19 and 20+ paid employees).

Figure: Businesses (VAT based local units) by employment size band  
Source: Office for National Statistics

Largest business sector	Second largest business sector	Third largest
Professional, scientific & technical services	Arts, entertainment, recreation & other services	Retail industry
13.9% of all local businesses	12.512.5% of all local businesses	% of all local businesses

Source: Office for National Statistics (2016)

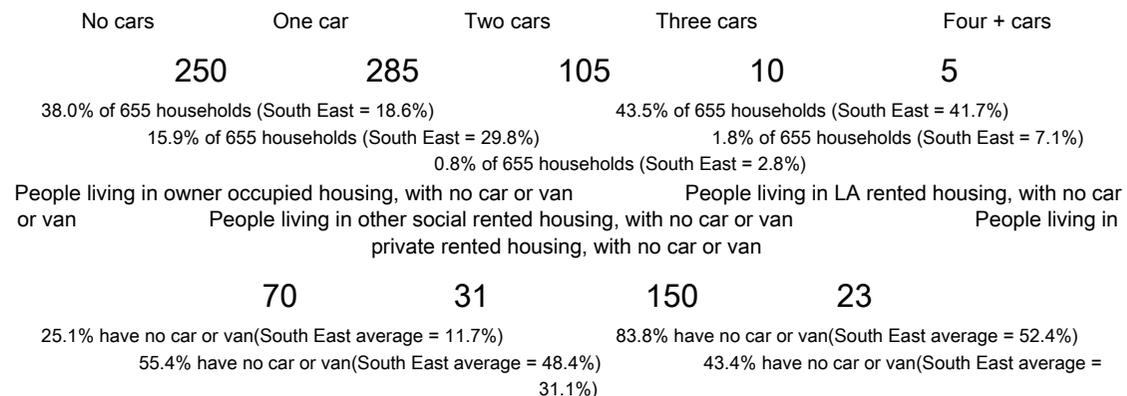

Figure: Percentage change in number of businesses (VAT based local units) per 10,000 working age population

### What information is shown here?

The information on the right shows details of the number of cars and vans in each household in Reedland Crescent with breakdowns also by tenure. This enables users to compare differences in car ownership across the owner occupied, social rented and private rented sectors. The count of cars or vans in an area is based on details for private households only. Cars or vans used by residents of communal establishments are not counted.

The information boxes show the number of households by number of cars owned across Reedland Crescent, while the charts show the same information (expressed as a percentage) against comparator areas.

Source: Census 2011

Figure: Car ownership  
Source: Census 2011

## What information is shown here?

The information on this page shows the accessibility of key services and amenities to people living in Reedland Crescent. Accessibility is measured both in terms of distance and travel times to key services.

The information boxes on the right show average distances (in kilometres) to five key services. The chart on the right shows average travel times in minutes to key services when walking or taking public transport.

Figure: Average travel time (mins) by walking or public transport to the nearest key service  
Source: Department for Transport: Core Accessibility Indicators (2015)

## What information is shown here?

The information on this page shows two measures of access to the internet. The first measure shows information on broadband take-up, speeds and availability. It has been produced by Ofcom and contains data provided by communications providers. The data shows the average broadband line speed in Reedland Crescent and the proportion of broadband connections in Reedland Crescent with low broadband speeds (less than 2 Mbit/s).

The chart on the right shows the proportion of people who responded to the 2011 Census online, compared with the proportion that filled in the Census form on paper in Reedland Crescent. This is a proxy measure of digital engagement as areas with a high proportion of online Census responses are more likely to be digitally engaged than those in areas with low levels of online responses.

Connections with low broadband speeds (less than 2 Mbit/s) (Mbit/s)	Average download broadband speed Average upload broadband speed (Mbit/s)	Average download broadband speed
03	25.43	3.46
0.7% (South East average = 2.8%)	South East average = 39.08	South East average = 4.19

## What information is shown here?

The information on this page looks at the characteristics of neighbourhoods across Reedland Cresent as defined using the Output Area Classification (OAC). OAC classifies every area in the country based on a set of socio-demographic characteristics, to provide a profile of areas to identify similarities between neighbourhoods. The information boxes on the right show the number and proportion of neighbourhoods in Reedland Cresent that fall within the eight supergroup categories, detailed below. The chart on the right shows the proportion of areas falling within supergroup categories across Reedland Cresent and comparators.

- Rural residents** Rural areas, sparsely populated, above average employment in agriculture, higher number owning multiple cars, an older married population, a high provision of unpaid care and an above average number of people living in communal establishments.
- Cosmopolitans** Residing in densely populated urban areas, high ethnic integration, high numbers of single young adults without children including students, high public transport use, above average qualification levels
- Ethnicity central** Concentrated in Inner London and other large cities, high ethnic diversity, high proportion of rented accommodation, high proportion of people living in flats, low car ownership.
- Multicultural metropolitans** Concentrated in larger urban conurbations in the transitional areas between urban centres and suburbia, high proportion of BME groups, high proportion of families.
- Urbanites** Predominantly in urban areas with high concentrations in southern England. More likely to live in either flats or terraces that are privately rented.
- Suburbanites** Located on the outskirts, in areas with high owner occupation, high numbers of detached houses, low unemployment, high qualifications and high car ownership.
- Constrained city dwellers** Higher proportion of older people, households are more likely to live in flats and to rent their accommodation, and there is a higher prevalence of overcrowding, higher proportion of people in poor health, lower qualification levels and high unemployment
- Hard-pressed living** Mostly on the fringe of the UK's urban areas, particularly in Wales and the North of England. High levels of people in terraced accommodation, high unemployment, low ethnic diversity, high levels of people employed in manufacturing

	Rural residents	Cosmopolitans metropolitans	Ethnicity central	Multicultural
	0 0.0% (South East average = 9.4%)	0 0.0% (South East average = 5.3%) 0.0% (South East average = 10.9%)	0 0.0% (South East average = 1.1%)	0
	Urbanites	Suburbanites	Constrained city dwellers	Hard-pressed living
	0 0.0% (South East average = 31.5%)	0 (South East average = 5.8%)	335 0.0% (South East average = 23.4%) 78.8% (South East average = 12.6%)	1,246 21.2%

## What information is shown here?

The information on this page shows different measures of people's satisfaction with their neighbourhood and their sense of community cohesion in the neighbourhood. It also shows different measures of people's participation in volunteering and political decision making in the local area. In addition the information box on the far bottom right shows the number of active charities per 1,000 population.

Figures are self-reported and taken from the Place Survey. The Place survey is collected at Local Authority level so does not include neighbourhood information, and ceased nationally in 2008 so is increasingly out of date.

Figure: Indicators of community strength  
Source: Place Survey (2008)

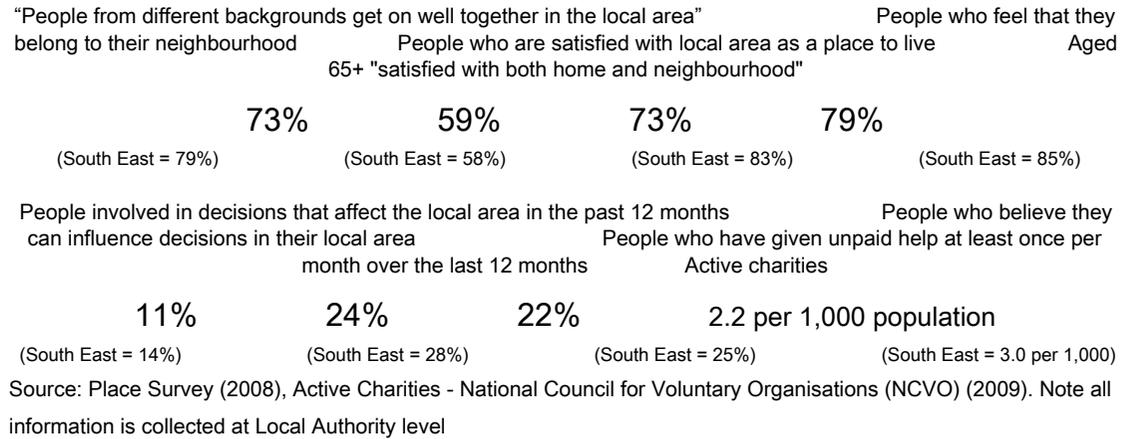

Figure: Indicators of civic engagement  
Source: Place Survey (2008)

## What information is shown here?

The page show the Community Dynamics indicators for Reedland Crescent. The Community Dynamics dataset (<http://communitydynamics.social-life.co/index.html>) has been developed by Social Life with the aim of quantifying how people feel about the area they live in.

By modelling responses from the annual Community Life Survey and Understanding Society Survey to Output Areas, Social Life have created small area measures of: strength of local social relationships, strength of belonging to a local area and satisfaction with a local area as a place to live.

Positive values represent greater belonging/relationship strength/satisfaction than the national average. Negative figures represent less belonging/relationship strength/satisfaction than the national average.

Please note that these indicators have been created by combining the survey responses of samples of the population and modelling these to Output Areas by linking survey sample demographics to the demographics of Output Areas. As a result, many implicit assumptions are built into the data which will not hold for all areas.

The values presented here offer an indication of community belonging, strength and satisfaction rather than an absolute measure.

Local social relationships	Belonging	Satisfaction with local area as a place to live
-0.031	-0.063	-0.012
(South East = -0.001)	(South East = 0)	(South East = 0)

Figure: Community Dynamic scores for belonging, relationships and satisfaction  
Source: Social Life (modelled from the annual Community Life Survey), 2015/2016

## What information is shown here?

The information on this page shows background concentrations from four air pollutants: nitrogen dioxide, benzene, sulphur dioxide and particulates. The air quality data was collected for 2012 on a 1km grid and obtained from the UK National Air Quality Archive for use in the Indices of Deprivation 2015. A higher score indicates a higher concentration of the pollution with a score of greater than 1 indicating that the levels of pollution exceed national standards of clean air.

Benzene concentrations	Nitrogen Dioxide concentrations	Sulphur Dioxide concentrations	Particulates (PM10) concentrations
0.08	0.3	0.4	0.04
(South East average = 0.08)	(South East average = 0.4)	(South East average = 0.4)	(South East average = 0.04)

Source: Communities and Local Government (Indices of Deprivation 2015 - from National Air Quality Archive 2012)

Figure: Air pollution concentrations for four pollutants

## What information is shown here?

Ordnance Survey (OS) publish the locations and extent of green spaces that are likely to be accessible to the public. The data include the following types of green spaces: allotments or community growing spaces, bowling greens, cemeteries, religious grounds, golf courses, other sports facilities, play spaces, playing fields, public parks or gardens and tennis courts.

OCSI have intersected OS Open Greenspaces data with Output Area boundaries to produce data for the greenspace per standard geographical area (eg OA, LSOA, LA).

Two green space measures are shown here. The total green space (which includes all types of green space) and the public parks and gardens green space (only public parks and gardens).

Large rural areas such as National Parks are not included in the OS Greenspace dataset. Religious grounds are included where there is seen to be a significant amount (>500m<sup>2</sup>) of accessible greenspace. Sports stadiums and grounds which are primarily for spectating rather than participating in sports are not included. Playing fields should only be included in OS Greenspace dataset where they are used by the public at least some of the time. Playing fields such as school fields which are entirely enclosed and only for use of the school, would not be expected to be included.

Wooded areas that function as public parks (i.e. are freely accessible to the public in their entirety and are managed for recreation) should be included, however, the constraints of the capture method employed to create the data mean that in many cases these may not yet be included.

OS data © Crown copyright and database right 2017

	Total green space	Public parks and gardens greenspace
	3.43%	0.00%
	1.02 hectares (South East average = 3.19%)	0.00 hectares (South East average = 1.15%)

### How we have identified the “Reedland Crescent” area

This report is based on the stock property location data (postcodes) loaded into Community Insight by Optivo, and the definition of the “Reedland Crescent” area (you can view this area on the Community Insight tool, either in the drop-down menu at the top-left of the map-page, or on the “Stock group” page if you are logged-in as an administrator). We have aggregated data for all the neighbourhoods in “Reedland Crescent” that contain stock, to create the data used in this report.

### Data in this report is based on regularly updated open data published by government sources

All the data in this report is based on open data published by more than 50 government agencies, collected and updated by OCSI on weekly basis. Data is updated on regular basis, with the reports and mapped data on the website reflecting the latest available data.

Details of the individual datasets are provided on the pages where the data is presented, with information on dates and sources presented alongside the charts and tables. On the website, information about each source is available on the popup “About the indicator” link at the top-right of the map.

### Standard geographies used in this report

**Super Output Areas (SOAs):** SOAs are a statistical geography created for the purpose of presenting data such as the Census, Indices of Deprivation, and other neighbourhood statistics. There are two layers to the SOA geography: ‘lower layer’ (LSOA) and ‘middle layer’ (MSOA). SOAs are designed to produce areas of roughly equal population size - 1,500 people for LSOAs and 7,200 for MSOAs. The majority of data used in this report is based on LSOA boundaries; of which there are 32,844 in England (there were changes to around 4% of LSOA definitions in Census 2011).

**Output Areas (OAs):** OAs are a more detailed statistical geography than SOAs, with each covering around 300 people, or 120 households. There are 171,372 OAs in England (there were changes to around 5% of OA definitions in Census 2011).

**Wards:** A small number of datasets are published at ward level. These are on average four times larger than LSOAs. Data is less detailed than LSOA level datasets and wards vary greatly in size, from less than 200 residents (Isles of Scilly), to more than 36,000 residents (in Sheffield).

Community Insight gives you the data and analysis you need to ensure your services are underpinned by the best possible knowledge of local communities, leveraging the power of information right across your organisation, from high-level visualisations for Board level to detailed reports on local neighbourhoods. Saving you time and money, Community Insight gives you the most relevant and up-to-date data on the communities where you work, with no need to invest in specialist mapping and data staff, consultancy or software. See [www.communityinsight.org](http://www.communityinsight.org) for more information.

Community Insight is developed jointly by HACT and OCSI.

HACT helps housing providers build stronger neighbourhoods and resilient communities. We believe housing providers are the foundation for changing people's lives for the better. We seek to influence housing practice and policy to transform lives and strengthen the resilience of communities. See [www.hact.org.uk](http://www.hact.org.uk) for more information.

OCSI work with public and community sector organisations to improve services. We turn complex datasets into engaging stories; making data, information and analysis accessible for communities and decision-makers. See [www.ocsi.co.uk](http://www.ocsi.co.uk) for more information.
